

WHY 95% PHOENIX COMBI?

ARCHITECTS & DESIGNERS

BENEFITS

Maximum Energy Saving for Both Water Heating & Space Heating

- One 95% Heat Source = Two Ways to Save: more energy is saved creating fast payback
- Enormous Title 24 benefits

Lower Cost, Integrated High Efficiency

- Phoenix is directly competitive with condensing furnaces/tankless and multiple furnace applications...and is more efficient

Very Reliable/Durable

- Spark Ignition
- Ultra High Grade Stainless Combustion Cap
- Electronic LWCO: Avoids Possibility of Dry Firing Heater

Phoenix provides plenty of hot water, when it is needed...choose from 55, 80 or 119 gallon models. (Phoenix 95% can outperform two 85% tankless heaters!)

Phoenix requires only one PVC vent for heating and hot water (compare that to what you are currently using!)

Space Efficient: 30"x 36" total mechanical space/zero clearance

Phoenix is super quiet plus Phoenix flame modulation drastically reduces on/off cycles.

Phoenix qualifies for the federal \$300 water heater tax credit. Ask about our Contender Energy Star system for the federal \$2,000 tax credit.

Low Carbon Emissions

- Phoenix displaces a TON of carbon emissions each year when compared to standard efficiency heating and hot water appliances for a 3,000 sq ft home!!!

Phoenix can reduce ducting with multiple air handlers or completely eliminate ducts using radiant heating or fan convectors.
