

WHY 95% PHOENIX COMBI?

BUILDERS

BENEFITS

Lower Cost, Integrated High Efficiency

Phoenix is directly competitive with condensing furnaces/tankless and multiple furnace applications...and is more efficient

Very Reliable/Durable

- Spark Ignition
- Ultra High Grade Stainless Combustion Cap
- Electronic LWCO: Avoids Possibility of Dry Firing Heater

95% combined hydronics with Phoenix provides enormous Title 24 benefits

Phoenix requires only one PVC vent for heating and hot water (compare that to what you are currently using!)

Phoenix can reduce ducting with multiple air handlers or completely eliminate ducts using radiant heating or fan convectors.

Phoenix is compact: The whole system can fit in a 30"x 36" closet!

Phoenix provides plenty of hot water, when it is needed...choose from 55, 80 or 119 gallon models. (Phoenix 95% can outperform two 85% tankless heaters!)

Phoenix is super quiet plus Phoenix flame modulation drastically reduces on/off cycles.

Phoenix offers an optional backup electric element. If they have power, they have hot water.

Phoenix is simple to install. If the contractor can install a water heater, they can install Phoenix. If the contractor can install a furnace, they can install air handlers.

Phoenix qualifies for the federal \$300 water heater tax credit. Ask about our Contender Energy Star system for the federal \$2,000 tax credit.
